

Mission Command Training & Simulation

Maximizing Readiness for our Warfighters

Tapestry Solutions provides Mission Command training and simulation services at major combat training centers, home station and forward-deployed environments to help prepare commanders and their staff for full-spectrum military operations.

Leveraging our core expertise in software development and integration, we design and conduct exercises in integrated Live, Virtual, Constructive and Gaming (LVC-G) environments. With LVC-G simulations, troops from geographically dispersed locations can collectively participate in the exercises in a virtual battlespace.

The training exercises enable warfighters to plan and rehearse large-scale, joint and multinational training events as well as small-unit tactical exercises. We manage and fuse exercise data, combining multiple sensor feeds such as video, audio and positional data. The data is presented during After Action Reviews (AARs) to capture key lessons learned.

Tapestry Solutions also provides

software and support for military logistics and cybersecurity training services, along with full-service maintenance and technical support. We turn raw data into actionable information with Enterprise IT services; Command and Control (C2) operations; and Command, Control, Communications, Computers, Intelligence, Surveillance and Reconnaissance (C4ISR) solutions.

AREAS OF EXPERTISE

- Software Design and Development
- LVC-G Integration
- Enterprise Information Technology
- Cyber Security and Information Management
- Data Fusion and Analytics
- C2 and C4ISR Solutions
- Real-time Tracking and Exercise Control (EXCON)
- After Action Reviews
- Testing and Verification
- Training Support and Maintenance

FULL-SPECTRUM TRAINING & SUPPORT

Tapestry Solutions provides Mission Command training & simulation support for large-scale, joint and multinational training events as well as small-unit tactical exercises.

We support all levels of training in LVC-G domains to maximize readiness for our warfighters.

MAJOR PROGRAMS

JMSC: Joint Multinational Simulation Center

Tapestry Solutions supports training and simulation at JMSC in Grafenwöhr, Germany, and its satellite in Kaiserslautern. At these centers, Tapestry designs, plans and conducts exercises ranging from Army unit-level activities to large-scale events involving multinational training units.

JMSC comes under the command of the United States Army Europe (7th Army Training Command), which provides military training solutions to U.S., allied and partner nation forces in Europe. JMSC facilitates Mission Command training from company to 3-star commander level by integrating LVC training environments.

JMRC: Joint Multinational Readiness Center

Tapestry Solutions provides training, simulation and technical support at JMRC, located in Hohenfels, Germany. JMRC is the U.S. Army's premier forward-stationed combat training center in Europe, falling under the leadership of the 7th Army Training Command.

We play a key role in the development and execution of Mission Rehearsal Exercises (MRE) and training events in LVC-G environments as that center prepares U.S., European allies and partner nations for joint and multinational coalition warfare.

The JMRC trains leaders, staffs and

units up to Brigade Combat Teams and multinational partners.

JDLM: Joint Deployment Logistics Model

JDLM provides commanders and their staffs with the complete array of computer-simulated exercises required to meet logistics training requirements. The simulation tool provides warfighters with the opportunity to exercise their C2 systems in a realistic constructive training environment.

JDLM can be linked to combat models, such as the Corps Battle Simulation (CBS), Joint Conflict And Tactical Simulation (JCATS), and Warfighters' Simulations (WARSIM) model. When operating in this federated mode, JDLM is used by the U.S. Joint Forces Command, the National Simulation Center and U.S. Army Battle Simulation Centers worldwide to provide logistics support for combat operations scenarios.

MCTSP: Mission Command Training Support Program

Tapestry Solutions supports home station training simulations for the Army National Guard (ARNG) under the Mission Command Training Support Program. We are teamed with prime contractor, Parsons Corporation, to provide simulation-supported staff training, mission command training, information systems and technical services to Army Guard units.

With the support of MCTSP mobile training teams, the distributed simulations training allows ARNG units to conduct training at their assigned unit locations without requiring travel to a regional Mission Training Complex.
