GOLD™esp

GOLDesp Software Typical Deployment

Combat Proven, Fully Deployable

GOLDesp™ extends military maintenance to the field with proven, battle-tested software features that have been successfully deployed in Iraq and Afghanistan by the UK Royal Navy and Royal Air Force. Units both in the field and at sea can use the system—connected or disconnected to their maintenance networks—just as they would when stationed at their home base. GOLDesp supports multiple, remote, independent operations with automated re-synchronization to a central database.
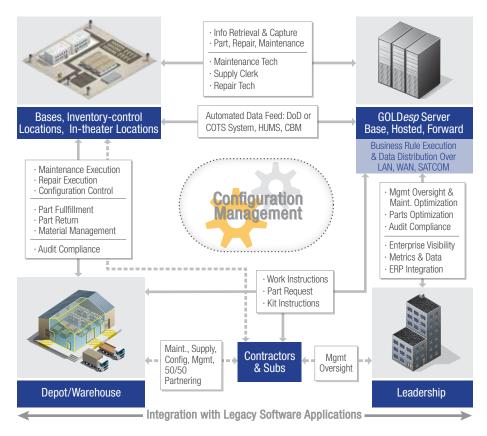

The UK Royal Navy and Royal Air Force deploy GOLDesp in Iraq and Afghanistan to streamline work recording and asset management
