

Mission Management Suite

Efficient Air Operations, Mission After Mission

ENTERPRISE PLANNING AND INTEGRATED COMMAND AND CONTROL

Mission Management Suite (M2S) is a fully integrated air operations planning, scheduling and management system designed to enhance command-and-control capabilities and streamline Air Operations Center (AOC) processes.

The system tracks and manages the full-spectrum of air operations, from initial tasking through mission completion, analysis and reporting.

EFFECTIVELY MANAGE RESOURCES

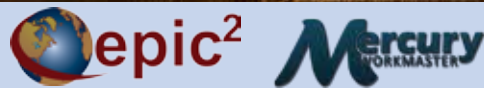

Mission Management Suite enables organizations to effectively and efficiently manage resources of any type throughout the resource utilization life-cycle, making it a truly flexible resource and operations management tool.

Using web-based technologies, M2S emphasizes decision support, visualization and intuitive, gesture-based capabilities to speed solution generation at all points along the mission life-cycle, providing a

comprehensive operating picture. It incorporates the core capabilities of requirements, planning, scheduling, execution, in-transit visibility, asset tracking, reporting and analysis supporting all operational phases, creating a superior level of productivity, value, and economy for your organization.

KEY BENEFITS

- Improves operational visibility across all levels of the organization
- Ease of planning and scheduling resources
- Improves collaborative workflow processes
- Financial planning/analysis - assists disruption planning and management
- Provides global common operating picture
- Can be integrated and deployed to deliver a seamless operation and maintenance management solution, providing greater operational efficiency and effective resource planning

Based on our epic² & Mercury Workmaster Software

ADVANCED OPERATIONS

Mission Management Suite can help your organization effectively plan, execute, and analyze your operations, allowing for greater efficiencies and effectiveness

M2S incorporates requirements, planning, scheduling, execution, ITV, asset tracking, reporting & analysis

CREW, TEAM & FLEET MANAGEMENT

M2S uses enhanced visualization techniques to highlight rapidly changing operational situations. Users are able to identify and optimize the best course of action during planning and resource scheduling.

Crew, team and fleet resource management components integrated together provide one location to manage processes, assets and people, along with other logistics functions.

Planners can easily detect resource availability providing complete resource visibility throughout the operation. The Business Rules Engine is able to maximize resource utilization and productivity by matching certain qualifications and criteria enabling your organization to increase cost savings and to improve efficiencies.

MODULAR, SCALABLE, CONFIGURABLE

Mission Management Suite is cloud capable and integrates with mobile applications allowing for real-time notifications. It has a robust, multi-faceted user interface that is customizable for all organizational levels.

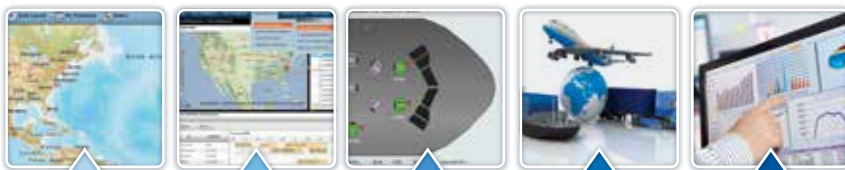

Collaboration tools allow for fully integrated planning and execution utilizing instant messenger and email to facilitate communication with key personnel critical to the operation.

M2S has an advanced design offering Service-Oriented Architecture (SOA), multi-platform support, integrated security, internationalized capabilities, and dynamic customization.

All levels of the organization benefit by improving visibility

ORGANIZATIONS ARE ABLE TO UTILIZE RESOURCES AND PLAN FOR MISSIONS MORE EFFECTIVELY WITH M2S. THROUGHOUT THE OPERATIONS PROCESS, M2S COLLECTS DATA FOR ANALYSIS ALLOWING FOR FUTURE IMPROVEMENTS
